DETAILED ACTION

Response to Petition

1. Applicant's petition for revival of an application for patent abandoned unintentionally under CFR 37 1.137(b) filed on 04/23/2010 has been granted and, therefore, the abandonment of that action is withdrawn. Claims 1-4, 6-8, 10-15, 18-19, and 21 are pending in the application.

Allowable Subject Matter

2. Claims 1-4, 6-8, 10-15, 18-19, and 21 are allowed.

As to independent claim 1, the prior art does not teach or fairly suggest a video transmission system, comprising: a video retransmitter residing on a first computing device and adapted to receive the video data via the network from the video server, said video retransmitter operable to buffer the video data and re-transmit the video data to a second computing device, wherein the second computing device is configured to receive the video data from either the video server or the video retransmitter, and operable to select either the video server or the video retransmitter as a source for the video data based on a metric associated with the transmission path of the video data from the source, wherein the video server receives the video data at a first resolution and the retransmitter is operable to re-transmit the video data at a second resolution different from the first resolution, and in combination with other

Art Unit: 2622

elements.

As to independent claim 10, the prior art does not teach or fairly suggest a video transmission system, comprising: a video retransmitter residing on a first computing device and adapted to receive the video data via the network from the video server, said video retransmitter operable to buffer the video data and re-transmit the video data to a second computing device, wherein the second computing device is configured to receive the video data from either the video server or the video retransmitter, and operable to select either the video server or the video retransmitter as a source for the video data based on a metric associated with the transmission path of the video data from the source, wherein the video server is operable to maintain a directory, where the directory includes a list of client computing devices to whom video data is currently being sent and which are configured to retransmit the video data, and in combination with other elements.

As to independent claim 14, the prior art does not teach or fairly suggest a method for transmitting video data across a network environment, comprising: transmitting the video data from the video server across a network to a first client computing device at a resolution different than a resolution of the video data received at the video server, and in combination with other elements.

As to claims 2-4, 6-8, 11-13, 15, 18-19, and 21, these claims are dependent upon allowable independent claims 1, 10, and 14, respectively, and are thus also considered allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than

Art Unit: 2622

the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
